Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
interface DeliveryCharge{
    double calDeliveryCharge(double foodcost);
}
interface Coupondiscount{
    double caldiscount(double foodcost, String couponcode);
}
class foodorder implements DeliveryCharge,Coupondiscount{
    public double calDeliveryCharge(double foodcost){
        if(foodcost>=500)
            return 0;
        return 50;
    }
    public double caldiscount(double foodcost,String couponcode){
        if(couponcode.equals("SAVE10"))
            return foodcost * 0.10;

        return 0;
    }
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);

        double foodcost=sc.nextDouble();
        String couponcode=sc.next();

        foodorder f = new foodorder();

        double deliverycharge = f.calDeliveryCharge(foodcost);
        double discount = f.caldiscount(foodcost,couponcode);
        double finalBill= foodcost+deliverycharge-discount;

        System.out.println("Food Cost : " +foodcost);
        System.out.println("Delivery Charge : " +deliverycharge);
        System.out.println("Discount : " +discount);
        System.out.println("Final Bill : " +finalBill);
    }
}
```

INPUT

600
SAVE10

OUTPUT

Food Cost : 600.0
Delivery Charge : 0.0
Discount : 60.0
Final Bill : 540.0

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 6.67 TC: 2/3 passed

CODE

```
import java.util.*;
interface servicecharge{
    double calservicecharge();
}
class Room implements servicecharge{
    int no;
    String name;
    double rent;

    Room(int no, String name,double rent){
        this.no=no;
        this.name=name;
        this.rent=rent;
    }
    public double calservicecharge(){
        if (rent>=5000)
            return rent*0.12;
        else
            return rent*0.8;
    }
    public static void main(String[] args){
        Scanner sc=new Scanner(System.in);

        int no=sc.nextInt();
        sc.nextLine();
        String name=sc.nextLine();
        double rent=sc.nextDouble();

        Room r=new Room(no,name,rent);

        double s=r.calservicecharge();

        System.out.println("Room Number : "+r.no);
        System.out.println("Guest Name : "+r.name);
        System.out.println("Room Rent : "+r.rent);
        System.out.println("Service Charge : "+s);
        System.out.println("Final Bill : "+(r.rent + s));
    }
}
```

INPUT

```
205
Ganesh
50000
```

OUTPUT

```
Room Number : 205
Guest Name : Ganesh
Room Rent : 50000.0
Service Charge : 6000.0
Final Bill : 56000.0
```
