Write a Program to Find the Nth Largest Number in a array.

Sample Input:

List : {14, 67, 48, 23, 5, 62}

N = 4

Sample Output:

4th Largest number: 23

Testcases:

1. N = 0
2. N = -5
3. N = 1
4. N = M
5. N = %

Your Code

```
1 import java.util.*;  
2 class main{  
3     public static void main(String[] args){  
4  
5  
6         int[] a={14,67,48,23,5,62};  
7         String input="4";  
8         try{  
9             int n=Integer.parseInt(input);  
10            if(n<=0 || n > a.length){  
11                System.out.println("Invalid N");  
12                return;  
13            }  
14        }  
15    }  
16 }
```

Output

4th Largest number: 23

Your Code

```
1 import java.util.*;  
2 class main{  
3     public static void main(String[] args){  
4  
5  
6         int[] a={14,67,48,23,5,62};  
7         String input="4";  
8         try{  
9             int n=Integer.parseInt(input);  
10            if(n<=0 || n > a.length){  
11                System.out.println("Invalid N");  
12                return;  
13            }  
14            Arrays.sort(a);  
15            System.out.println(n+"th Largest number:");  
16        }  
17        catch(Exception e){  
18            System.out.println("Invalid N");  
19        }  
20    }  
21 }  
22  
23  
24  
25
```

Output

4th Largest number: 23

Write a program to convert Decimal number equivalent to Binary number and octal numbers?

Sample Input:

Decimal Number: 15

Sample Output:

Binary Number = 1111

Octal = 17

Testcases:

1. 111

2. 15.2

3. 0

4. 812

5. 1A.2

Your Code

```
1 import java.util.Scanner;  
2 class main{  
3     public static void main(String[] args){  
4         Scanner sc=new Scanner(System.in);  
5         String s=sc.nextLine();  
6         try{  
7             int n=Integer.parseInt(s);  
8             System.out.println("Binary Number= "+Integer.toBinaryString(n));  
9             System.out.println("Octal = "+Integer.toOctalString(n));  
10        }  
11        catch(NumberFormatException e){  
12            System.out.println("Invalid input");  
13        }  
14    }  
15 }
```

Output

```
Binary Number= 1111  
Octal = 17
```

2. 5678765
3. MALAY12321ALAM
4. MALAYALAM
5. 1234.4321

Your Code

```
1 import java.util.Scanner;  
2 public class main(  
3     public static void main(String[] args){  
4         Scanner sc=new Scanner(System.in);  
5  
6         String str=sc.nextLine();  
7         String rev="";  
8         for(int i=str.length()-1;i>=0;i--){  
9             rev+=str.charAt(i);  
10        }  
11        if(str.equals(rev)){  
12            System.out.println("palindrome");  
13        }  
14  
15        else(  
16            System.out.println("not palindrome");  
17  
18        }  
19    }  
20 }
```

Output

palindrome

Q4
Strings

Testcases:

1. Enter the grade of the employee: A
Enter the employee salary: 8000
2. Enter the grade of the employee: C
Enter the employee salary: 60000
3. Enter the grade of the employee: B
Enter the employee salary: 0
4. Enter the grade of the employee: 38000
Enter the employee salary: A

Your Code

```
1 import java.util.Scanner;
2 class main{
3     public static void main(String[] args){
4         Scanner sc=new Scanner(System.in);
5         int n=sc.nextInt();
6
7         if(int A>=5000){
8             System.out.println("employee salary: 8000");
9         }
10        else
11        if(int c>=6000){
12            System.out.println("employee salary is:60000");
13        }else{
14            if(int b>=38000){
15                System.out.println("enter a salary:");
16            }
17        }
18    }
19 }
```

Output
